Five-Minute Check (over Chapter 11)

Main Ideas and Vocabulary

Example 1: Draw a Stem-and-Leaf Plot

Example 2: Interpret Data

Example 3: Real-World Example

Main Ideas

- Display data in stem-and-leaf plots.
- Interpret data in stem-and-leaf plots.

New Vocabulary

- stem-and-leaf plot
- stems
- leaves
- back-to-back stem-and-leaf plot

**Real-World EXAMPLE****Draw a Stem-and-Leaf Plot**

- 1 FOOD** Display the data in a stem-and-leaf plot.

Peanuts Harvested, 2001	
State	Amount (lb)
Alabama	2400
Florida	2800
Georgia	2800
New Mexico	2400
North Carolina	2900
Oklahoma	2200
South Carolina	2900
Texas	2600
Virginia	3000

**Real-World EXAMPLE****Draw a Stem-and-Leaf Plot**

- 1 Step 1** Find the least and the greatest number. Then identify the greatest place value digit in each number. In this case, thousands.

2200

The least number
has 2 in the
thousands place

3000

The greatest number
has 3 in the
thousands place

**Real-World EXAMPLE****Draw a Stem-and-Leaf Plot**

1 Step 2 Draw a vertical line and write the stems 2 and 3 to the left of the line.

Step 3 Write the leaves to the right of the line, with the corresponding stem. For example, for 2400, write 4 to the right of 2.

Stem	Leaf
2	4 8 8 4 9 2 9 6
3	0

**Real-World EXAMPLE****Draw a Stem-and-Leaf Plot**

- 1 Step 4** Rearrange the leaves so they are ordered from least to greatest. Then include a key or an explanation.

Stem	Leaf
2	2 4 4 6 8 8 9 9
3	0

$2|4 = 2400 \text{ lb}$ ←

The key tells what the stems and leaves represent.

**Real-World EXAMPLE****Draw a Stem-and-Leaf Plot****1 Answer:**

Stem	Leaf
2	2 4 4 6 8 8 9 9
3	0

$$2/4 = 2400 \text{ lb}$$

 **CHECK** Your Progress

- 1 **SPEED** Display the following speeds given in miles per hour in a stem-and-leaf plot.

65 72 59 68 75 70 68 64 67 69 72 55

 **CHECK Your Progress**

1 **A.**

Stem	Leaf
6	5 8 8 4 7 9
7	2 5 0 2
5	9 5

$6/4 = 64 \text{ mph}$

B.

Stem	Leaf
5	5 9
6	4 5 7 8 8 9
7	0 2 2 5

$6/4 = 64 \text{ mph}$

C.

Stem	Leaf
5	5 9
6	4 5 7 8 9
7	0 2 5

$6/4 = 64 \text{ mph}$

D.

Stem	Leaf
6	4 5 7 8 9
7	0 5 0 2
5	9 5

$6/4 = 64 \text{ mph}$

Real-World EXAMPLE
Interpret Data

- 2 MEXICO** The stem-and-leaf plot lists the percent of people in each state in 2004 that were born in Mexico, rounded to the nearest whole number.

A. What interval contains the most percentages?

Answer: Most of the data occurs in the 0-9 interval.

Stem	Leaf
0	0 0 0 1 1 2 2 3 4 4 5 5 5
0	6 6 8 8 8
1	0 1 4 4 7
2	1 2 3 8 9
3	1 2 3 5 5 9 9
4	0 1 2 3 3 3 4 6 8
5	2 6 6
6	4 6
7	4
	$3/1 = 31\%$

Real-World EXAMPLE
Interpret Data

2 **MEXICO** The stem-and-leaf plot lists the percent of people in each state in 2004 that were born in Mexico, rounded to the nearest whole number.

B. What is the greatest percent of people living in one U.S. state that were born in Mexico?

Answer: 74%

Stem	Leaf
0	0 0 0 1 1 2 2 3 4 4 5 5 5
0	6 6 8 8 8
1	0 1 4 4 7
2	1 2 3 8
3	1 2 3 5 5 9 9
4	0 1 2 3 3 3 4 6 8
5	2 6 6
6	4 6
7	4

$3/1 = 31\%$

Real-World EXAMPLE
Interpret Data

- 2** **MEXICO** The stem-and-leaf plot lists the percent of people in each state in 2004 that were born in Mexico, rounded to the nearest whole number.

C. What is the median percent of people living in one U.S. state that were born in Mexico?

Answer: 22.5%

Stem	Leaf
0	0 0 0 1 1 2 2 3 4 4 5 5 5
0	6 6 8 8 8
1	0 1 4 4 7
2	1 2 3 8
3	1 2 3 5 5 9 9
4	0 1 2 3 3 3 4 6 8
5	2 6 6
6	4 6
7	4

$3/1 = 31\%$

CHECK Your Progress

Stem	Leaf
0	0 5
1	0 2 2 5 8 8 8
2	0 0 0 4 4 5 5 5 5
3	0 0 2 2 2 4 4 5 5 6 6
4	0 2 4 4 5 5 5 5 8 8 9 9
5	0 0

$3/1 = 31\%$

2 ALLOWANCE The stem-and-leaf plot lists the amount of allowance students are given each month.

A. In which interval do most of the monthly allowances occur?

- A. 0-9 interval
- B. 20-29 interval
- C.** 40-49 interval
- D. 50-59 interval

0%
|

A B C D

CHECK Your Progress

- 2 ALLOWANCE** The stem-and-leaf plot lists the amount of allowance students are given each month.
- B.** What is the difference between the least and greatest monthly allowance given?

- A. \$0
- B. \$5
- C.** \$50
- D. \$495

Stem	Leaf
0	0 5
1	0 2 2 5 8 8 8
2	0 0 0 4 4 5 5 5 5
3	0 0 2 2 2 4 4 5 5 6 6
4	0 2 4 4 5 5 5 5 8 8 9 9
5	0 0

$3/1 = 31\%$

0%

 A B C D

CHECK Your Progress

- 2 ALLOWANCE** The stem-and-leaf plot lists the amount of allowance students are given each month.
- C.** What is the median monthly allowance given?

Stem	Leaf
0	0 5
1	0 2 2 5 8 8 8
2	0 0 0 4 4 5 5 5 5
3	0 0 2 2 2 4 4 5 5 6 6
4	0 2 4 4 5 5 5 5 8 8 9 9
5	0 0

$3/1 = 31\%$

- A.** \$25 and \$45
- B.** \$30
- C.** \$30.8
- D.** \$32

0%

 A B C D

Real-World EXAMPLE

- 3** **AGRICULTURE** The yearly production of honey in California and Florida is shown for the years 2000 to 2004, in millions of pounds. (Source: USDA)

A. Which state produces the most honey?

California		Florida
7	1	4
8 4	2	0 0 2 4
2 1	3	

$2|3 = 32$ million lb $2|0 = 20$ million lb

Answer: California

Real-World EXAMPLE

- 3** **AGRICULTURE** The yearly production of honey in California and Florida is shown for the years 2000 to 2004, in millions of pounds. (Source: USDA)

B. Which state has the most varied production? Explain.

California		Florida
7	1	4
8 4	2	0 0 2 4
2 1	3	

$$2|3 = 32 \text{ million lb} \quad 2|0 = 20 \text{ million lb}$$

Answer: California; the data are more spread out.

CHECK Your Progress

3 EXAM SCORES The exam score earned on the first test in a particular class is shown for male and female students.

A. Which group of students had the higher test scores?

Male		Female
8 2	6	
9 6 4	7	4 8 8 9
7 4 2 2 0	8	1 3 4 8 9
6 5 3	9	2 5 9
$2/8 = 82$		$7/4 = 74$

0%

- A. males **B. females**
- C. Both groups had an equally high score.
- D. cannot be determined

 A B C D

CHECK Your Progress

3 EXAM SCORES The exam score earned on the first test in a particular class is shown for male and female students.

B. Which group of students had more varied test scores?

Male		Female
8 2	6	
9 6 4	7	4 8 8 9
7 4 2 2 0	8	1 3 4 8 9
6 5 3	9	2 5 9
$2/8 = 82$		$7/4 = 74$

0%

 A B C D

Five-Minute Check (over Lesson 12-1)

Main Ideas and Vocabulary

Example 1: Range

Key Concept: Interquartile Range

Example 2: Interquartile Range and Outliers

Example 3: Real-World Example

Main Ideas

- Find measures of variation.
- Use measures of variation to interpret and compare data.

New Vocabulary

- measures of variation
- outlier
- range
- quartiles
- lower quartile
- upper quartile
- interquartile range

EXAMPLE Range

1 A. Find the range of the set of data.

$\{\$79, \$42, \$38, \$51, \$63, \$91\}$

The greatest value is \$91, and the least value is \$38.

Answer: The range is $\$91 - \38 or $\$53$.

EXAMPLE Range

- 1 B. Find the range of the set of data.

Stem	Leaf
3	3 3 5 7 7 8
4	0 3 3 4 9
5	4 9

$$3/5 = 35$$

The greatest value is 59, and the least value is 33.

Answer: The range is $59 - 33$ or 26.

 **CHECK Your Progress**

1 A. Find the range of the set of data.
{14, 37, 82, 45, 24, 10, 75}

A. 61

B. 65

C. 68

D. 72

CHECK Your Progress

1 B. Find the range of the set of data.

A. 27

Stem	Leaf
5	2 3 5 5 9
6	4 8 9
7	0 1 8 9

B. 20

$$6/8 = 68$$

C. 18

D. 12

KEY CONCEPT*Interquartile Range*

Words The interquartile range is the range of the middle half of a set of data. It is the difference between the upper quartile and the lower quartile.

Symbols Interquartile range = $UQ - LQ$

EXAMPLE Interquartile Range and Outliers

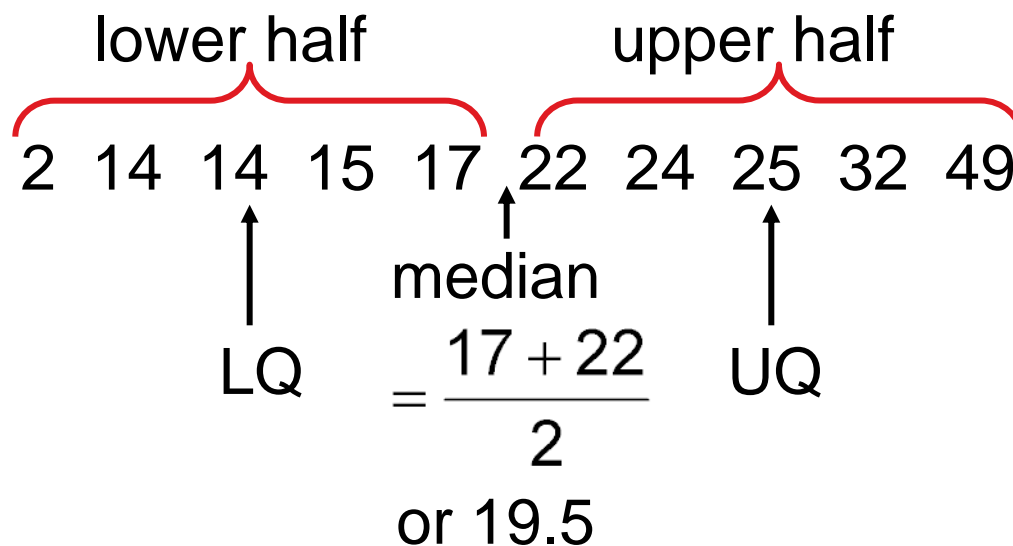

2 **Answer:** The interquartile range is $40 - 33$ or 7 .

EXAMPLE Interquartile Range and Outliers

- 2 B.** Find the interquartile range and any outliers for {2, 49, 17, 14, 14, 22, 15, 32, 24, 25}

Step 1 List the data from least to greatest. Then find the median.

Step 2 Find the upper and lower quartiles.

EXAMPLE Interquartile Range and Outliers

2 Step 3 Find the limits for the outliers.

Multiply the interquartile range, 11, by 1.5

$$11 \times 1.5 = 16.5$$

Subtract 16.5 from the lower quartile $14 - 16.5 = -2.5$

Add 16.5 to the upper quartile $25 + 16.5 = 41.5$

The limits for the outliers are -2.5 and 41.5 . There are no values less than -2.5 . One value, 49, is greater than 41.5 .

Answer: So, 49 is the one outlier.

 **CHECK Your Progress**

- 2** Find the interquartile range and any outliers.
{12, 18, 25, 31, 23, 19, 16, 22, 28, 32}
- A.** interquartile range: 10, outliers: none
B. interquartile range: 15, outliers: 3.43
C. interquartile range: 20, outliers: none
D. interquartile range: 24, outliers: 12

0%

 A B C D

Real-World EXAMPLE

- 3 LAND USE** The urban land in certain western and eastern states is listed below as the percent of each state's total land, rounded to the nearest percent.

Western States	Eastern States
1 1 1 1 1 0 0	0
3 2 2 2 1 1 1	0 3 3 4 5 6 6 8
5 4 4	0 8 9 9 9 9 9 9
	1 1 3 3 4 4 5
	2 3 6 7
$2/0 = 2\%$	3 5 $2/7 = 27\%$

Answer: The median percent of urban land use for the western states is 1%. The median percent of urban land use for the eastern states is 9%.

Real-World EXAMPLE

- 3 LAND USE** The urban land in certain western and eastern states is listed below as the percent of each state's total land, rounded to the nearest percent.

B. Compare the range for each set of data.

Western States		Eastern States
1 1 1 1 1 0 0	0	
3 2 2 2 1 1 1	0	3 3 4 5 6 6 8
5 4 4	0	8 9 9 9 9 9 9
	1	1 3 3 4 4 5
	2	3 6 7
$2/0 = 2\%$	3	5 $2/7 = 27\%$

Answer: The range for the west is $5\% - 0\%$ or 5% , and the range for the east is $35\% - 3\%$ or 32% . The percents of urban land use in the east vary more.

CHECK Your Progress

3 **A. EXERCISE** The hours per week spent exercising for teenagers and people in their twenties are listed in the stem-and-leaf plot. What is the median time spent exercising for each group?

Teens		Twenties
5 4 2 0	0	0 4 6 7 9
7 3	1	0 2 2 5
1	2	0 3 4 5 8

$3|1 = 13 \text{ hr}$ $1|5 = 15 \text{ hr}$

- A.** teenagers: 5 hr; twenties: 12 hr
- B.** teenagers: 8.9 hr; twenties: 13.9 hr
- C.** teenagers: 15 hr; twenties: 16 hr
- D.** teenagers: 21 hr; twenties: 28 hr

0%

 A B C D

 **CHECK Your Progress**

3 B. EXERCISE The hours per week spent exercising for teenagers and people in their twenties are listed in the stem-and-leaf plot. Compare the range for each set of data.

Teens		Twenties
5 4 2 0	0	0 4 6 7 9
7 3	1	0 2 2 5
1	2	0 3 4 5 8
$3/1 = 13 \text{ hr}$		$1/5 = 15 \text{ hr}$

- A.** teenagers: 12 hr; twenties: 28 hr
The hours of the twenties group vary more.
- B.** teenagers: 15 hr; twenties: 16 hr
The hours of the twenties group vary only slightly more.
- C.** teenagers: 22.5 hr; twenties: 24 hr
The hours of the twenties group vary only slightly more.
- D.** teenagers: 5 hr; twenties: 12 hr
The hours of the twenties group vary more.

Five-Minute Check (over Lesson 12-2)

Main Ideas and Vocabulary

Example 1: Draw a Box-and-Whisker Plot

Example 2: Interpret Data

Example 3: Real-World Example

Main Ideas

- Display data in a box-and-whisker plot.
- Interpret data in a box-and-whisker plot.

New Vocabulary

- box-and-whisker plot

**Real-World EXAMPLE****Draw a Box-and-Whisker Plot**

- 1 JOBS** The projected number of employees in 2008 in the fastest-growing occupations is shown. Display the data in a box-and-whisker plot.

Step 1 Find the least and greatest number. Then draw a number line that covers the range of the data.

Fastest Growing Jobs	
Occupation	Jobs (1000s)
Computer Engineer	622
Computer Support	869
Systems Analyst	1194
Database Administrator	155
Desktop Publishing	44
Paralegal/Legal Assistant	220
Home Health Aide	1179
Medical Assistant	398

**Real-World EXAMPLE****Draw a Box-and-Whisker Plot**

- 1 Step 2** Find the median, the extremes, and the upper and lower quartiles. Mark these points above the number line.

Real-World EXAMPLE
Draw a Box-and-Whisker Plot

1 Step 3 Draw a box and the whiskers.

The box contains the UQ and the LQ

The whiskers extend from each quartile to the extreme data points.

Answer:

CHECK Your Progress

1 TRANSPORTATION The data listed below represents the time, in minutes, required for students to travel from home to school each day. Display the data in a box-and-whisker plot.

14 32 7 45 18 22 26 9 4 18 15

A.

B.

C.

D.

**Real-World EXAMPLE****Interpret Data**

- 2** **A. WEATHER** The box-and-whisker plot below shows the average percent of sunny days per year for selected cities in each state. Half of the selected cities have an average of sunny days under what percent?

Answer: Half of the selected cities have an average percent of sunny days under 56%.

**Real-World EXAMPLE****Interpret Data**

- 2 B. WEATHER** The box-and-whisker plot below shows the average percent of sunny days per year for selected cities in each state. What does the length of the box in the box-and-whisker plot tell about the data?

Answer: The length of the box is short. This tells us that the data values are clustered together.

 **CHECK** Your Progress

- 2** **A. RETAIL** The box-and-whisker plot below shows the average amount spent per month on clothing. Half of the monthly expenditures on clothing are under what amount?

0%

- A. \$275
B. \$120
C. \$80
D. \$55

A B C D

CHECK Your Progress

- 2** **B. RETAIL** The box-and-whisker plot to the right shows the average amount spent per month on clothing. What does the length of the box in the box-and-whisker plot tell about the data?
- A.** The values of the data in the lower half are very spread out.
 - B.** The values of the data in the upper half are very concentrated.
 - C.** The values of the data in the middle 50% are very spread out.
 - D.** The values of the data in the middle 50% are concentrated.

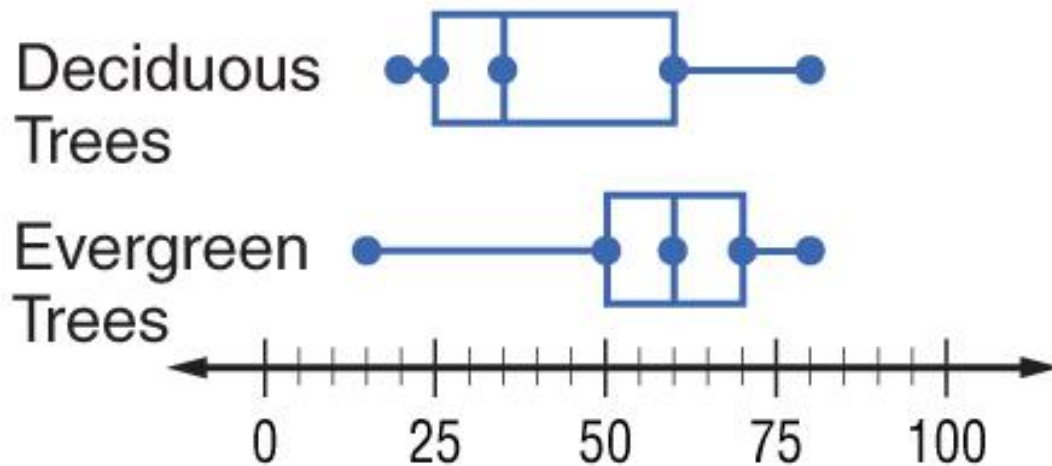

0%

 A B C D

**Real-World EXAMPLE**

- 3 TREES** The average maximum height, in feet, for selected evergreen trees and deciduous trees is displayed. How do the heights of evergreen trees compare with the heights of deciduous trees?

**Real-World EXAMPLE**

- 3** Most deciduous trees range in height between 25 and 60 feet. However, some are as tall as 80 feet. Most evergreen trees range in height between 50 and 70 feet. However, some are as tall as 80 feet.

Answer: Most evergreen trees are taller than most deciduous trees.

✓ CHECK Your Progress

- 3 CARS** The average gas mileage, in miles per gallon, for selected compact cars and sedans is displayed. How do the gas mileages of compact cars compare with the gas mileages for sedans?

- A. The gas mileage of compact cars and sedans is about the same.
- B. Most compact cars have a lower gas mileage than most sedans.
- C. Most compact cars have a higher gas mileage than most sedans.
- D. The median gas mileage for compact cars is lower than the median gas mileage for sedans.

Five-Minute Check (over Lesson 12-3)

Main Ideas and Vocabulary

Example 1: Draw a Histogram

Example 2: Interpret Data

Example 3: Real-World Example

Main Ideas

- Display data in a histogram.
- Interpret data in a histogram.

New Vocabulary

- histogram

**Real-World EXAMPLE****Draw a Histogram**

- 1 TOURISM** The frequency table shows the number of overseas visitors to the top 15 U.S. cities in 2004. Display the data in a histogram.

Overseas Travelers		
Number of Visitors (1000s)	Tally	Frequency
0–1000	 	9
1001–2000		2
2001–3000		1
3001–4000		
4001–5000		2
5001–6000		1

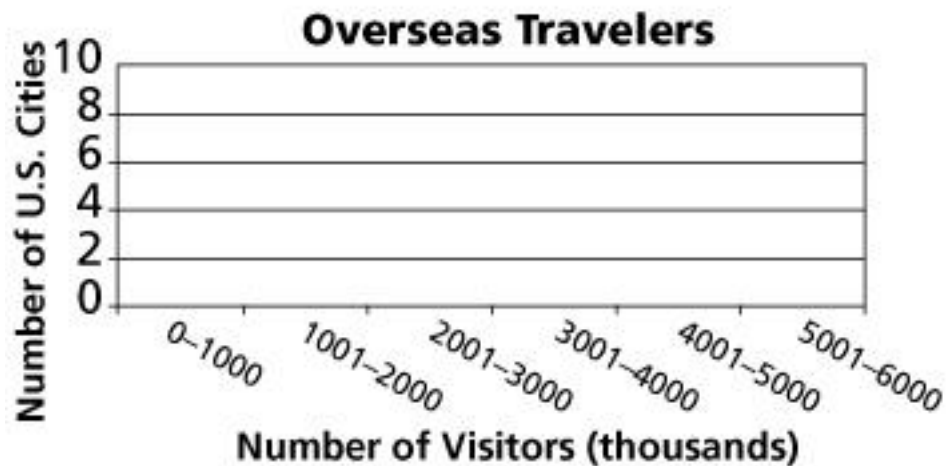

**Real-World EXAMPLE****Draw a Histogram**

- 1 Step 1** Draw and label a horizontal and vertical axis. Include a title.

**Real-World EXAMPLE****Draw a Histogram**

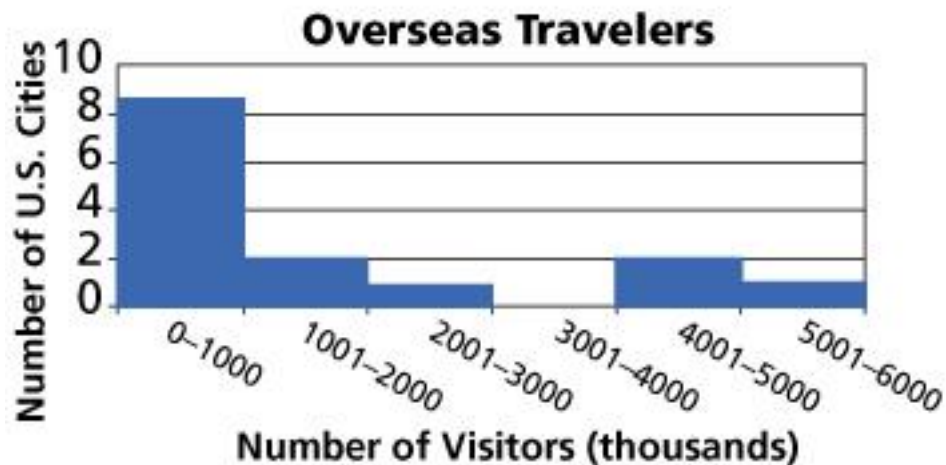

- 1 Step 2** Show the intervals from the frequency table on the horizontal axis and an interval of 2 on the vertical axis.

**Real-World EXAMPLE****Draw a Histogram**

- 1 Step 3** For each interval, draw a bar whose height is given by the frequency.

Answer:

 **CHECK Your Progress**

- 1 CUSTOMERS** The frequency table shows the number of daily customers a new grocery store has during its first 30 days in business. Display the data in a histogram.

Daily Customers		
Number of Customers	Tally	Frequency
0-49	I	6
50-99		12
100-149	IIII	9
150-199		3

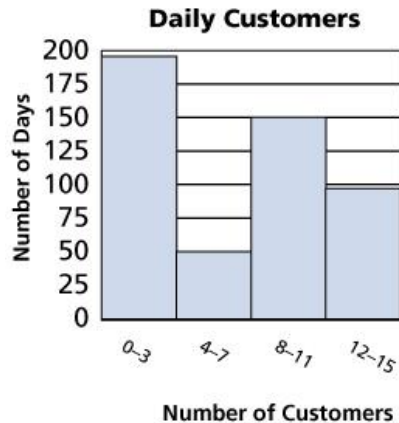

CHECK Your Progress

1

A.

B.

C.

D.

**Real-World EXAMPLE****Interpret Data**

- 2** **A. ELEVATIONS** Use the histogram. How many states have highest points with elevations at least 3751 meters?

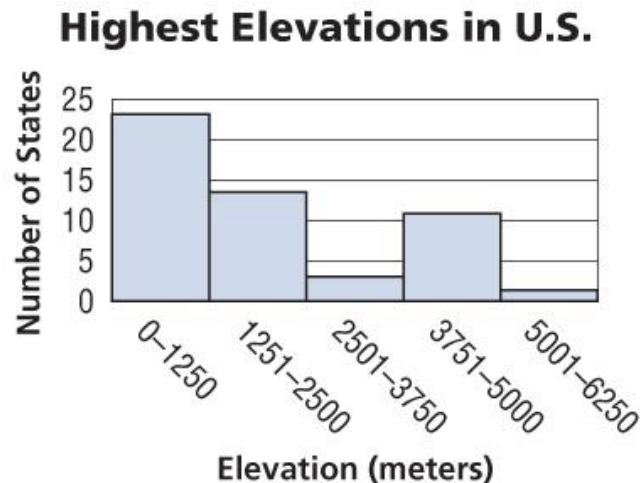

Since 11 states have elevations in the 3751-5000 range and 1 state has elevations in the 5001-6250 range, $11 + 1$ or 12 states have highest points with elevations at least 3751 meters.

Answer: 12

**Real-World EXAMPLE****Interpret Data**

- 2** **B. ELEVATIONS** Use the histogram. Is it possible to tell the height of the tallest point?

Answer: No, you can only tell that the highest point is between 5001 and 6250 meters.

 **CHECK Your Progress**

- 2 **A. SPEED** Use the histogram. How many drivers had a speed of at least 70 miles per hour?

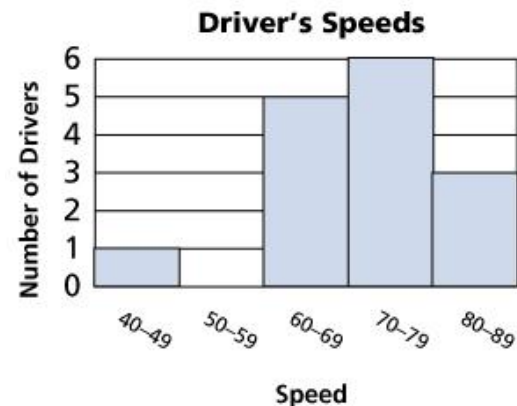

- A. 3
B. 5
C. 6
D. 9

A B C D

 **CHECK** Your Progress

- 2** **B. SPEED** Use the histogram. Is it possible to tell the lowest speed driven?
- A.** Yes, the lowest speed was 40 miles per hour.
 - B.** Yes, the lowest speed was 45 miles per hour.
 - C.** Yes, the lowest speed was 49 miles per hour.
 - D.** No, you can only determine that the lowest speed was between 40 and 49 miles per hour.

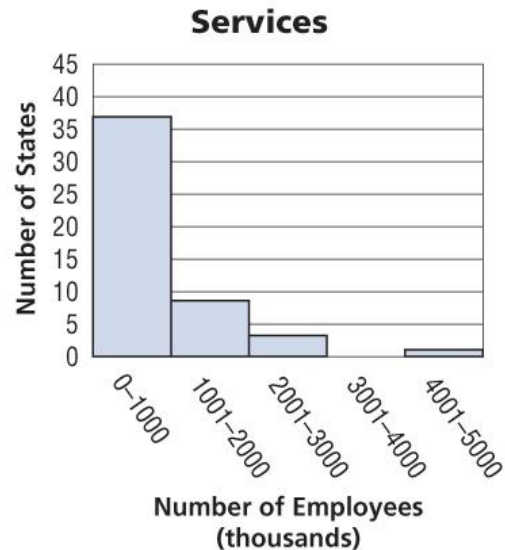

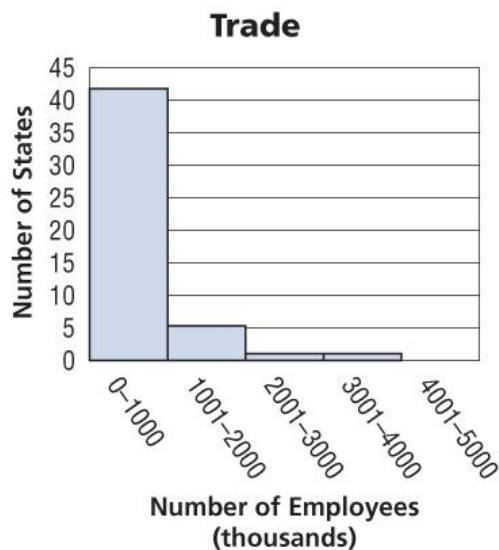

0%

A B C D

**Real-World EXAMPLE**

- 3 EMPLOYMENT** Use the histograms. Which business sector has more states with between 1,001,000 and 3,000,000 employees?

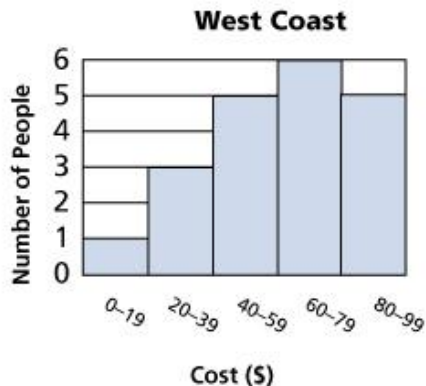

Answer: Services

CHECK Your Progress

3 EATING OUT Use the histograms. Which coast has more people spending at least \$60 weekly?

Dining Out Expenses

0%

- A. East Coast
- B. West Coast**
- C. Both have an equal number of people spending at least \$60 weekly.
- D. cannot be determined

Five-Minute Check (over Lesson 12-4)

Main Idea

Concept Summary: Statistical Graphs

Example 1: Select an Appropriate Display

Example 2: Standardized Test Example

Main Idea

- Select an appropriate display for a set of data.

CONCEPT SUMMARY

Statistical Graphs

Display	Best Time to Use
Bar Graph Box-and-Whisker Plot	to display the frequency of data in categories to divide a set of data into four parts using the median and quartiles
Circle Graph Frequency Table	to compare parts of the data to the whole to compare the number of values in intervals
Histogram	to display numerical data that has been organized into equal intervals
Line Graph Line Plot	to show change over a period of time to display how many times each number occurs in data
Stem-and-Leaf Plot Table Venn Diagram	to list all the data in a condensed form to list data individually or by groups to display relationships among sets of data

Concepts in Motion

Interactive Lab:
Bar Graphs and Line Graphs

[Click here to view!](#)

**Real-World EXAMPLE****Select an Appropriate Display**

- 1** **A. DESSERT** Danielle took a survey of her classmates' preferences for desserts. Danielle's survey revealed that 46% of her classmates like pies, 32% like ice cream, 9% like cake, 7% like candy, and 6% don't have a preference. Select an appropriate type of display for this situation. Then make the display with or without the use of technology.

Answer: A circle graph would compare the parts of the data to the whole.

Real-World EXAMPLE
Select an Appropriate Display

- 1 B. LACROSSE** Juan compares the heights of the players on the two lacrosse teams. Juan's team has the following players with heights, in inches: 61, 60, 58, 59, 57, 67, 58, 60, 60, 65, 61, and 61. The rival team has the following players, with heights, in inches: 62, 70, 65, 60, 60, 58, 66, 63, 61, 57, 67, and 64. Select an appropriate type of display for this situation. Then make the display with or without the use of technology.

A back-to-back stem-and-leaf plot would condense and compare the data.

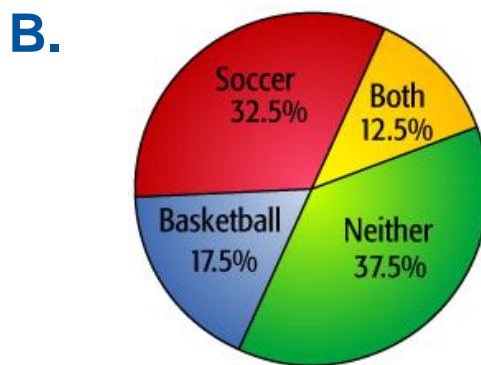

Juan's Team		Rival
9 8 8 7	5	7 8
7 5 1 1 1 0 0 0	6	0 0 1 2 3 4 5 6 7
	7	0

5/7 = 57 inches

Answer:

CHECK Your Progress

1 A. SPORTS Out of 40 athletes surveyed, 12 play basketball and 18 play soccer. Of those athletes who play either sport, 5 play both sports. Select an appropriate type of display for this situation. Then make the display with or without the use of technology.

D.

Sport	Number of Participants
Basketball	12
Soccer	18
Both	5
Neither	15

 **CHECK Your Progress**

- 1 B. TEST SCORES** Ms. Slater compares the scores of the students in her two math classes. The morning math class earned the following scores on the last test: 98, 82, 76, 94, 65, 82, 78, 98, 86, 93, 74, 96, 73, 87, and 81. The afternoon math class earned the following scores: 86, 93, 75, 89, 100, 84, 86, 97, 64, 95, 92, 85, 79, 90, and 85. Select an appropriate type of display for this situation. Then make the display with or without the using technology.

CHECK Your Progress

B.

Grade	Number of Students
91 - 100	
81 - 90	
71 - 80	
61-70	

D.

Morning class	Afternoon class
	10 0
8 8 6 4 3	9 0 2 3 5 7
7 6 2 2 1	8 4 5 5 6 6 9
8 6 4 3	7 5 9
5	6 4 5/6 = 56

Standardized Test EXAMPLE

2 Which graph would best represent the data if you want to show relationships among sets of data?

A line graph

B Venn diagram

C bar graph

D circle graph

Answer: B

 **CHECK Your Progress**

- 2 Which graph would best represent the data if you want to show how many times each number occurs in the data?
- A. box-and-whisker plot
 - B. line plot**
 - C. line graph
 - D. bar graph

Five-Minute Check (over Lesson 12-5)

Main Ideas

Example 1: Real-World Example

Example 2: Accuracy of Predictions and
Conclusions

Main Ideas

- Recognize when graphs are misleading.
- Evaluate predictions and conclusions based on data analysis.

**Real-World EXAMPLE**

- 1** **A. FOOD** The graphs show the decrease in the price of lemons. Why do the graphs look different?

Answer: The horizontal scales differ.

Real-World EXAMPLE

- 1 B. FOOD** The graphs show the decrease in the price of lemons. Which graph appears to show a more rapid decrease in the price of lemons after 2002? Explain.

Answer: Graph B; the slope of the line from 2002 to 2004 is steeper in Graph B.

CHECK Your Progress

1 **A. ATTENDANCE** The graphs show the increase in attendance at a public elementary school. Why do the graphs look different?

- A.** The vertical scales differ.
- B.** The vertical axis does not include zero.
- C.** There are no labels on either side.
- D.** The horizontal scales differ.

 **CHECK Your Progress**

- 1 B. ATTENDANCE** The graphs show the increase in attendance at a public elementary school. Which graph appears to show a more rapid increase in attendance between 2002 and 2003? Explain.
- A.** Graph A; The slope of the line from 2002 to 2003 is steeper in graph A.
- B.** Graph B; The slope of the line from 2002 to 2003 is steeper in graph B.
- C.** Both graphs show the same increase from 2002 to 2003.
- D.** cannot be determined

**Real-World EXAMPLE****Accuracy of Predictions and Conclusions**

2 INTERNET The graph shows the percent of Internet use in different age groups. According to the graph, more 18- to 24-year-olds are using the internet than the other age groups. Determine whether this statement is accurate. Justify your reasoning.

Answer: No, the statement is not accurate. Even though the 18-24 age group has the greatest percent of users, the other age groups span a greater age range and thus have more people.

 **CHECK** Your Progress

- 2 WEATHER** According to the graph, the difference between the number of days with temperatures 20°F – 49°F and 50°F – 79°F is the same as the difference between 50°F – 79°F and 80°F – 99°F . Determine whether this statement is accurate. Justify your reasoning.

CHECK Your Progress

2 **A.** Yes, the bars for the 20°F – 49°F interval and the 50°F – 79°F interval are $1\frac{1}{2}$ lines apart and so are the bars for the 50°F – 79°F interval and the 80°F – 99°F interval.

B. No, the difference between the number of days in the 20°F – 49°F interval and the 50°F – 79°F interval is 25 while the difference between the 50°F – 79°F interval and the 80°F – 99°F interval is 20.

C. Yes, the intervals on the horizontal axis are all evenly spaced

D. Yes, the numbers on the vertical axis are all evenly spaced.

Five-Minute Check (over Lesson 12-6)

Main Ideas and Vocabulary

Key Concept: Probability

Example 1: Find Probability

Example 2: Find Probability

Example 3: Find Experimental Probability

Example 4: Make a Prediction

Main Ideas

- Find the probability of simple events.
- Use a sample to predict the actions of a larger group.

New Vocabulary

- outcomes
- simple event
- probability
- sample space
- theoretical probability
- experimental probability

KEY CONCEPT*Probability*

Words The probability of an event is a ratio that compares the number of favorable outcomes to the number of possible outcomes.

Symbols $P(\text{event}) = \frac{\text{number of favorable outcomes}}{\text{number of possible outcomes}}$

Concepts in Motion

BrainPOP:
Probability of Events

Chapter
RESOURCES

EXAMPLE Find Probability

- 1** Suppose a number cube is rolled. What is the probability of rolling a 4 or a 5?

There are 2 numbers on the number cube that are a 4 or a 5: 4 and 5.

There are 6 possible outcomes: 1, 2, 3, 4, 5, and 6.

$$P(4 \text{ or } 5) = \frac{\text{number of favorable outcomes}}{\text{number of possible outcomes}}$$
$$= \frac{2}{6} \text{ or } \frac{1}{3}$$

Answer: The probability of rolling a 4 or a 5 is $\frac{1}{3}$
or $33\frac{1}{3}\%$.

 **CHECK Your Progress**

1 Suppose a number cube is rolled. What is the probability of rolling a number that is divisible by 3?

A. $\frac{1}{6}$ or $16\frac{2}{3}\%$

B. $\frac{1}{3}$ or $33\frac{1}{3}\%$

C. $\frac{1}{2}$ or 50%

D. $\frac{2}{3}$ or $66\frac{2}{3}\%$

EXAMPLE Find Probability

- 2** Suppose that two number cubes are rolled. Find the probability of rolling two identical numbers.

Make a table showing the sample space when rolling two number cubes.

	1	2	3	4	5	6
1	(1, 1)	(1, 2)	(1, 3)	(1, 4)	(1, 5)	(1, 6)
2	(2, 1)	(2, 2)	(2, 3)	(2, 4)	(2, 5)	(2, 6)
3	(3, 1)	(3, 2)	(3, 3)	(3, 4)	(3, 5)	(3, 6)
4	(4, 1)	(4, 2)	(4, 3)	(4, 4)	(4, 5)	(4, 6)
5	(5, 1)	(5, 2)	(5, 3)	(5, 4)	(5, 5)	(5, 6)
6	(6, 1)	(6, 2)	(6, 3)	(6, 4)	(6, 5)	(6, 6)

EXAMPLE Find Probability

- 2 There are 6 outcomes in which the two numbers are identical.

Answer: $P(\text{two identical numbers}) = \frac{6}{36}$ or $\frac{1}{6}$.

This means there is a $\frac{1}{6}$ or $16\frac{2}{3}\%$ chance of rolling two identical numbers.

 **CHECK Your Progress**

2 Suppose that two number cubes are rolled. Find the probability of rolling two numbers whose sum is 8.

A. $\frac{1}{15}$ or about 5.6%

B. $\frac{1}{12}$ or about $8\frac{1}{3}\%$

C. $\frac{1}{9}$ or about $11\frac{1}{9}\%$

D. $\frac{5}{36}$ or about 13.9%

0%

 A B C D

EXAMPLE Find Experimental Probability

- 3** A coin was tossed 40 times and heads came up 18 times. Find the experimental probability of getting tails for this experiment.

$$\frac{\text{number of times tails occur}}{\text{number of possible outcomes}} = \frac{40 - 18}{40} = \frac{22}{40} \text{ or } \frac{11}{20}.$$

Answer: The experimental probability of getting tails in this case is $\frac{11}{20}$ or 55%.

 **CHECK Your Progress**

3 BASKETBALL Brian is shooting baskets with a basketball. He makes 13 shots and misses 9 shots. Determine the experimental probability of Brian making a shot.

A. $\frac{4}{13}$ or about 31%

0%

B. $\frac{9}{22}$ or about 41%

C. $\frac{13}{22}$ or about 59%

D. $\frac{9}{13}$ or about 69%

 A B C D

**Real-World EXAMPLE****Make a Prediction**

- 4 SPORTS** Miss Newman surveyed her class to see which sports they preferred watching. 44% preferred football, 28% basketball, 20% soccer, and 8% tennis. Out of 560 students in the entire school, how many would you expect to say they prefer watching basketball?

The total number of students is 560. So, 560 is the base. The percent is 28%.

What number is 28% of 560? Write the percent proportion. Let a represent the part.

**Real-World EXAMPLE****Make a Prediction**

$$\begin{array}{l} \text{part} \longrightarrow \\ \text{base} \longrightarrow \end{array} \frac{a}{560} = \frac{28}{100} \longleftarrow \text{percent}$$

$$100 \cdot a = 560 \cdot 28 \quad \text{Find the cross products.}$$

$$100a = 15,680 \quad \text{Simplify.}$$

$$a = 156.80 \quad \text{Mentally divide} \\ \text{each side by 100.}$$

Answer: You can expect about 157 students to say they prefer watching basketball.

 **CHECK** Your Progress

- 4** **COLORS** The students in an art class were surveyed about their favorite color. 32% preferred blue, 29% preferred red, 23% preferred yellow, and 16% preferred green. Out of 450 students in the entire school, how many would you expect to say they prefer red?
- A. about 6
- B. 29
- C.** about 131
- D. 144

Five-Minute Check (over Lesson 12-7)

Main Ideas and Vocabulary

Example 1: Use a Tree Diagram to Count Outcomes

Key Concept: Fundamental Counting Principle

Example 2: Use the Fundamental Counting Principle

Example 3: Find Probabilities

Main Ideas

- Use tree diagrams or the Fundamental Counting Principle to count outcomes.
- Use the Fundamental Counting Principle to find the probability of an event.

New Vocabulary

- tree diagram
- Fundamental Counting Principle

EXAMPLE**Use a Tree Diagram to Count Outcomes**

- 1 GREETING CARDS** A greeting card maker offers three birthday greetings in four possible colors, as shown below. Draw a tree diagram to find the number of cards that can be made from three greeting choices and four color choices?

Greeting**Color**

Humorous

Blue

Traditional

Green

Romantic

Orange

Red

EXAMPLE Use a Tree Diagram to Count Outcomes

- 1 You can draw a diagram to find the number of possible cards.

Answer: There are 12 possible cards.

 **CHECK** Your Progress

1 ICE CREAM An ice cream parlor offers a special on one-scoop sundaes with one topping. The ice cream parlor has 5 different flavors of ice cream and three different choices for toppings. How many different sundaes can be made?

- A. 3
- B. 5
- C. 8
- D. 15**

KEY CONCEPT***Fundamental Counting Principle***

Words If event M can occur in m outcomes and is followed by event N that can occur in n outcomes, then the event M followed by N can occur in $m \cdot n$ outcomes.

Example If there are 5 possible decks and 3 possible sets of wheels, then there are $5 \cdot 3$ or 15 possible skateboards.

EXAMPLE Use the Fundamental Counting Principle

- 2 CELL PHONES** A cell phone company offers 3 payment plans, 4 styles of phones, and 6 decorative phone wraps. How many phone options are available?

Use the Fundamental Counting Principle.

The number of types of payment plans	times	the number of styles of phones	times	the number of decorative wraps	equals	the number of possible outcomes.
						
3	×	4	×	6	=	72

Answer: There are 72 possible phone options.

 **CHECK Your Progress**

2 SANDWICHES A sandwich shop offers 4 choices for bread, 5 choices for meat, and 3 choices for cheese. If a customer can make one choice from each category, how many different sandwiches can be made?

- A.** 60
- B.** 12
- C.** 5
- D.** 3

0%

 A B C D

EXAMPLE Find Probabilities

- 3** A. Henry rolls a number cube and tosses a coin. What is the probability that he will roll a 3 and toss heads?

First find the number of outcomes.

EXAMPLE Find Probabilities

- 3 There are 12 possible outcomes.

Look at the tree diagram. There is one outcome that has a 3 and a head.

$$\begin{aligned} P(3 \text{ and head}) &= \frac{\text{number of favorable outcomes}}{\text{number of possible outcomes}} \\ &= \frac{1}{12} \end{aligned}$$

Answer : The probability that Henry will roll a 3 and toss heads is $\frac{1}{12}$.

EXAMPLE Find Probabilities

- 3 B.** What is the probability of winning a raffle where the winning number is made up of 6 numbers from 1 to 50 chosen at random? Assume all numbers are eligible each draw.

First, find the number of possible outcomes. Use the Fundamental Counting Principle.

There are 50 choices for the first number, 50 choices for the second number, 50 choices for the third number, and so on.

$$50 \times 50 \times 50 \times 50 \times 50 \times 50 = 15,625,000,000$$

EXAMPLE Find Probabilities

- 3 There are 15,625,000,000 possible outcomes.
There is 1 winning number.

Answer : The probability of winning with one ticket is

$$\frac{1}{15,625,000,000}$$

 **CHECK Your Progress**

3 A. Bob rolls a number cube and tosses a coin. What is the probability that he will roll an odd number and toss tails?

A. $\frac{1}{4}$

B. $\frac{1}{3}$

C. $\frac{3}{8}$

D. 1

0%

 A B C D

 **CHECK Your Progress**

3 B. What is the probability of winning a lottery where the winning number is made up of 5 numbers from 1 to 20 chosen at random? Assume all numbers are eligible each draw.

A. $\frac{1}{4}$

0%

B. $\frac{1}{20}$

C. $\frac{1}{100}$

D. $\frac{1}{3,200,000}$

Five-Minute Check (over Lesson 12-8)

Main Ideas and Vocabulary

Example 1: Use a Permutation

Example 2: Use a Combination

Example 3: Real-World Example

Main Ideas

- Use permutations.
- Use combinations.

New Vocabulary

- permutation
- combination

**Real-World EXAMPLE****Use a Permutation**

- 1 A. TRAVEL** The Reyes family will visit a complex of theme parks during their summer vacation. They have a four-day pass good at one park per day; they can choose from seven parks. How many different ways can they arrange their vacation schedule?

The order in which they visit the parks is important. This arrangement is a permutation.

7 parks Choose 4

$$p(7,4) = 7 \cdot 6 \cdot 5 \cdot 4$$
$$= 840$$

7 choices for the 1st day
6 choices for the 2nd day
5 choices for the 3rd day
4 choices for the 4th day

Answer: There are 840 possible arrangements.

**Real-World EXAMPLE****Use a Permutation**

- 1 B. NUMBERS** How many five-digit numbers can be made from the digits 2, 3, 4, 5, 8, and 9 if each digit is used only once?

$$\begin{aligned} p(5,5) &= 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1 \\ &= 120 \end{aligned}$$

5 choices for the 1st digit
4 choices for the 2nd digit
3 choices for the 3rd digit
2 choices for the 4th digit
1 choice remains for the 5th digit

Answer: 720

 **CHECK** Your Progress

- 1** **A. TRACK AND FIELD** How many ways can five runners be arranged on a three-person relay team?
- A. 10
 - B. 30
 - C. 60**
 - D. 120

 **CHECK** Your Progress

- 1 **B.** How many six-digit numbers can be made from the digits 1, 2, 3, 4, 5, and 6 if each digit is used only once?
- A. 6
- B.** 720
- C. 7776
- D. 46,656

**Real-World EXAMPLE****Use a Combination**

- 2 HATS** How many ways can a window dresser choose two hats out of a fedora, a bowler, and a sombrero?

Since order is not important, this arrangement is a combination.

First, list all of the permutations of the types of hats taken two at a time.

Then cross off arrangements that are the same as another one.

FB FS ~~BF~~ BS ~~SF~~ ~~SB~~

FB and BF are not different in this case, so cross off one of them.

**Real-World EXAMPLE****Use a Combination**

- 2 There are only three *different* arrangements.

Answer: There are three ways to choose two hats from three possible hats.

Real-World EXAMPLE
Use a Combination

- 2 B. PENS** How many ways can a customer choose two pens from a purple, orange, green, red, or black pen?

The arrangement is a combination because order is not important.

First, list all of the permutations.

Then cross off the arrangements that are the same.

<i>PO</i>	<i>PG</i>	<i>PR</i>	<i>PB</i>	<i>OP</i>	<i>OG</i>	<i>OR</i>
<i>OB</i>	<i>GP</i>	<i>GO</i>	<i>GR</i>	<i>GB</i>	<i>RP</i>	<i>RO</i>
<i>RG</i>	<i>RB</i>	<i>BP</i>	<i>BO</i>	<i>BG</i>	<i>BR</i>	

Answer: There are 10 ways to choose two pens from five possible colored pens.

 **CHECK** Your Progress

2 **A. SHIRTS** How many ways can two shirts be selected from a display having a red shirt, a blue shirt, a green shirt, and a white shirt?

A. 4

B. 6

C. 12

D. 24

0%

A B C D

 **CHECK Your Progress**

2 B. BOOKS How many ways can a student select 2 books from a bookshelf containing a mystery, a biography, a non-fiction book, a fantasy book, and a novel?

- A.** 10
- B.** 20
- C.** 60
- D.** 120

0%

 A B C D

**Real-World EXAMPLE**

- 3 TENNIS** The players listed are playing singles in a tennis tournament. If each player plays every other player once, what is the probability that Kyle plays in the first match?

Thomas	Carl
Ager	Jack
Brian	Seth
Kyle	Pedro

Explore The order in which the players are selected is not important, so this is a combination.

Plan Find the combination of 8 people taken 2 at a time. This will give you the number of matches that take place during the tournament. Then find how many of the matches involve Kyle.

**Real-World EXAMPLE**

- 3 Solve** $C(8, 2) = \frac{8 \cdot 7}{2 \cdot 1} = 28$ There are 28 way to choose 2 people. Kyle plays each person once during the tournament. If there are 7 other players, Kyle is involved in 7 matches. So the probability that Kyle plays in the first match is $\frac{7}{28}$ or $\frac{1}{4}$.

Check List all the 2-player matches in the tournament. Check to see that there are 28 matches.

**Real-World EXAMPLE**

3 Answer: $\frac{7}{28}$ or $\frac{1}{4}$

CHECK Your Progress

- 3 VOLLEYBALL** The teams listed are playing in a volleyball tournament. If each team plays every other team once, what is the probability that the Lions play in the first game?

A. $\frac{1}{90}$

B. $\frac{1}{45}$

C. $\frac{1}{10}$

D. $\frac{1}{5}$

Huskers	Broncos
Gators	Waves
Cougars	Red Storm
Wild Cats	Lions
Badgers	Bearcats

Five-Minute Check (over Lesson 12-9)

Main Ideas and Vocabulary

Concept Summary: Probability of Two Independent Events

Example 1: Probability of Independent Events

Key Concept: Probability of Two Dependent Events

Example 2: Probability of Dependent Events

Key Concept: Probability of Mutually Exclusive Events

Example 3: Probability of Mutually Exclusive Events

Main Ideas

- Find the probability of independent and dependent events.
- Find the probability of mutually exclusive events.

New Vocabulary

- composite events
- independent events
- dependent events
- mutually exclusive events

CONCEPT SUMMARY

Probability of Two Independent Events

Words The probability of two independent events is found by multiplying the probability of the first event by the probability of the second event.

Symbols $P(A \text{ and } B) = P(A) \cdot P(B)$

Example $P(\text{red and white}) = \frac{1}{2} \cdot \frac{1}{2}$ or $\frac{1}{4}$

EXAMPLE Probability of Independent Events

- 1 GAMES** In a popular number cube game, the highest possible score in a single turn is a roll of five of a kind. After rolling one five of a kind, every other five of a kind you roll earns 100 points. What is the probability of rolling two five of a kinds in a row?

The events are independent since each roll does not affect the outcome of the next roll.

There are six ways to roll five of a kind, (1, 1, 1, 1, 1), (2, 2, 2, 2, 2), and so on, and there are 6^5 or 7776 ways to roll five dice. So, the probability of rolling five of a kind on a toss of the number of cubes is $\frac{6}{7776}$ or $\frac{1}{1296}$.

EXAMPLE Probability of Independent Events

$$\begin{aligned} \textcircled{1} \quad & P(\text{two five of a kind}) = \\ & P(\text{five of a kind on first roll}) \bullet \\ & P(\text{five of a kind on second roll}) \end{aligned}$$

$$= \frac{1}{1296} \bullet \frac{1}{1296}$$

$$= \frac{1}{1,679,616}$$

Answer : The probability of rolling two five of a kind in a row is $\frac{1}{1,679,616}$.

 **CHECK** Your Progress

1 GAMES Find the probability of rolling doubles four times in a row when rolling a pair of number cubes.

A. $\frac{1}{3808}$

B. $\frac{1}{1296}$

C. $\frac{1}{256}$

D. $\frac{2}{3}$

KEY CONCEPT***Probability of Two Dependent Events***

Words If two events, A and B , are dependent, then the probability of both events occurring is the product of the probability of A and the probability of B after A occurs.

Symbols $P(A \text{ and } B) = P(A) \cdot P(B \text{ following } A)$

Example $P(\text{red and white, without replacement}) = \frac{1}{2} \cdot \frac{2}{3}$ or $\frac{1}{3}$

EXAMPLE Probability of Dependent Events

- 2 CLOTHES** Charlie's clothes closet contains 3 blue shirts, 10 white shirts, and 7 striped shirts. What is the probability that Charlie will reach in and randomly select a white shirt followed by a striped shirt?

$$\begin{aligned}P(\text{white shirt and striped shirt}) &= \frac{10}{20} \cdot \frac{7}{19} \\ &= \frac{70}{380} \text{ or } \frac{7}{38}\end{aligned}$$

Answer : The probability Charlie will select a white shirt followed by a striped shirt is $\frac{7}{38}$.

 **CHECK** Your Progress

- 2** **COOKIES** A plate has 6 chocolate chip cookies, 4 peanut butter cookies, and 5 sugar cookies. What is the probability of randomly selecting a chocolate chip cookie followed by a sugar cookie?

A. $\frac{1}{30}$

B. $\frac{1}{7}$

C. $\frac{11}{30}$

D. $\frac{159}{210}$

0%

 A B C D

KEY CONCEPT***Probability of Mutually Exclusive Events***

Words The probability of one or the other of two mutually exclusive events can be found by adding the probability of the first event to the probability of the second event.

Symbols $P(A \text{ or } B) = P(A) + P(B)$

Example $P(5 \text{ or even}) = \frac{4}{36} + \frac{18}{36}$ or $\frac{11}{18}$

EXAMPLE Probability of Mutually Exclusive Events

- 3** You draw a card from a standard deck of playing cards. What is the probability that the card will be a black nine or any heart?

The events are mutually exclusive because the card cannot be both a black nine and a heart at the same time.

$$\begin{aligned}P(\text{black nine or heart}) &= P(\text{black nine}) + P(\text{heart}) \\ &= \frac{2}{52} + \frac{13}{52} \\ &= \frac{15}{52}\end{aligned}$$

EXAMPLE Probability of Mutually Exclusive Events

- ③ **Answer :** The probability that the card will be a black nine or any heart is $\frac{15}{52}$.

 **CHECK Your Progress**

3 CARDS You draw a card from a standard deck of playing cards. What is the probability that the card will be a club or a red face card?

A. $\frac{3}{104}$

B. $\frac{3}{102}$

C. $\frac{19}{52}$

D. $\frac{39}{52}$

Five-Minute CHECK

(over Lesson 12-2)

- 1 Refer to the table. Find the interquartile range for the highest average annual precipitation (HAAP) and for the elevation (EI).

HAAP (in.)	EI. (ft.)
524	520
467	4597
460	5148
405	30
354	120
340	5102
256	12
183	3337

- A. 142.75; 4625.75
- B. 205; 5050.5
- C. 165.5; 4774.5**
- D. 211; 5072

Five-Minute CHECK

(over Lesson 12-2)

2 Refer to the table. For which set of data is the middle data more clustered about the median? Which choice provides a correct explanation?

- A.** The data for the average annual precipitation is more clustered around the median because the interquartile range is smaller
- B.** The data for the elevation is more clustered around the median because the interquartile range is high.
- C.** The data for the elevation is more clustered around the median because the interquartile range is high.
- D.** The data for the average annual precipitation is more clustered around the median because the interquartile range is high.
